DETAILED ACTION

Allowable Subject Matter

Claims 1-22 are allowed.

The following is an examiner's statement of reasons for allowance: Prior art does not teach or suggest, in combination with the other claimed limitations, a method for plasma-treating an exposed copper surface and exposed dielectric insulating layer comprising plasma-treating the surface in a first plasma comprising reduction gas and nitriding gas, and then plasma-treating the surface in a second plasma comprising oxidizing gas, said second plasma treatment performed without deposition of a material layer.

The closest prior art of record, Noguchi et al., teaches a second plasma treatment in an oxidizing gas, but during this process, a material layer is deposited. Ngo teaches a first plasma treatment in an oxidizing gas and a second plasma treatment in a reduction gas and nitriding gas, but this process is not in the order claimed in the instant invention.

Additionally, Eissa et al. (U.S. 2004/0058528) teaches a method of etching an exposed copper surface and a TaN layer on top of a dielectric layer using a first plasma treatment comprising a reduction gas and a nitriding gas and a second plasma treatment comprising an oxidizing gas, but in this case the dielectric layer is not exposed (TaN is not insulating).

Finally, Smith et al. (U.S. 2002/0127840) teaches a method of ashing photoresist from a dielectric layer with an exposed copper surface using a first plasma treatment

comprising a reduction gas and a nitriding gas and a second plasma treatment comprising an oxidizing gas, but in this case the dielectric layer is covered by photoresist and is therefore not exposed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
